

## BCH TEG Interpretation Guideline

**R-time > 10: transfuse FFP 10-20 ml/kg**

**K-time > 3 or angle < 55: transfuse cryo 0.1-0.2 unit/kg**

**MA < 50: transfuse platelets 10-20 ml/kg**

**\*LY30 > 3%: administer TXA 10 mg/kg**

\*The trigger for TXA administration is small, but that's because the drug is relatively benign compared to blood products
