

## Accepting Trauma Transfers in - Guideline Based Clinical Pearls

- Trauma Center Scope of Service is up to the 19<sup>th</sup> birthday.
- Expedite transfer without delay!
  - Optimal to have intensivist bridged in for vent/drip management, however, DO NOT delay transfer waiting for intensivist, trauma surgeon will update.
- Trauma transfers (not already admitted to an ICU or hospital ward) BY DEFAULT should come to the ED for pediatric trauma evaluation on arrival unless otherwise specified by the trauma surgeon. This includes IFT acute trauma coming from an OR or PACU.

## Clinical considerations while waiting for transport:

	ions while waiting for transport:
Mod/Severe TBI	<ul> <li>Assume cervical injury, place collar</li> <li>Intubate if GCS &lt;9 or decline by 2; (prefer no propofol in trauma); CO2 goal 35-40</li> </ul>
	S/S of elevated ICP-
	<ul> <li>Osmotic therapy preference in trauma: 3% NaCl 5ml/kg over 10-20 min</li> <li>Mannitol is not recommended in trauma patients. If already given by OSH, ensure fluid resuscitation is ongoing and appropriate to maintain MAP &amp; CPP</li> <li>Seizure ppx- Keppra 40mg/kg IV loading dose</li> <li>If open fx (skull or face) – give antibiotics</li> <li>Avoid excess IV fluids if hemodynamically stable; if crystalloid needed for tachycardia 20ml/kg NS &amp; assess for hemorrhage</li> <li>Normothermia, correct acidosis, INR goal &lt;1.4</li> <li>Consider TXA (see below)</li> <li>No NSAIDs</li> </ul>
Hemorrhage	Pedi hemorrhagic shock- tachy, delay CRT, mottled; if hypotensive assume >30%
management: i.e.	blood loss
Poly trauma (TBI w add'l injury) –	Assessment for blood consumption
add i iiijdi y j	$\land$ Panatrating $\pm E/NNI$ tachycardia hynotonsion acidosis (Rasa deticit $N=NN$
	<ul> <li>Penetrating, +FAST, tachycardia, hypotension, acidosis (Base deficit &gt; – 8.8, lactate &gt;3.5)</li> </ul>
, ,,	
	lactate >3.5)  o >2 findings: activate MTP; switch from crystalloid to blood products  • Give blood products in balanced ratios PRBC:FFP; wt. based ~10ml/kg
, ,,	lactate >3.5)  > >2 findings: activate MTP; switch from crystalloid to blood products  Give blood products in balanced ratios PRBC:FFP; wt. based ~10ml/kg  TXA if w/in 3 hours from injury – 15mg/kg over 10 min
	lactate >3.5)  > 2 findings: activate MTP; switch from crystalloid to blood products  Give blood products in balanced ratios PRBC:FFP; wt. based ~10ml/kg  TXA if w/in 3 hours from injury – 15mg/kg over 10 min  Mannitol contraindicated- Neurosurgeon discretion only
	lactate >3.5)  > 2 findings: activate MTP; switch from crystalloid to blood products  • Give blood products in balanced ratios PRBC:FFP; wt. based ~10ml/kg  • TXA if w/in 3 hours from injury – 15mg/kg over 10 min  • Mannitol contraindicated- Neurosurgeon discretion only  • No NSAIDs
Orthopedic trauma	lactate >3.5)  > 2 findings: activate MTP; switch from crystalloid to blood products  • Give blood products in balanced ratios PRBC:FFP; wt. based ~10ml/kg  • TXA if w/in 3 hours from injury – 15mg/kg over 10 min  • Mannitol contraindicated- Neurosurgeon discretion only  • No NSAIDs  • Refer to Ortho & Plastics Intake Guide for injuries requiring Ortho attending comm'n
	lactate >3.5)  > 2 findings: activate MTP; switch from crystalloid to blood products  • Give blood products in balanced ratios PRBC:FFP; wt. based ~10ml/kg  • TXA if w/in 3 hours from injury – 15mg/kg over 10 min  • Mannitol contraindicated- Neurosurgeon discretion only  • No NSAIDs  • Refer to Ortho & Plastics Intake Guide for injuries requiring Ortho attending comm'n  • Antibiotics for all open fractures w/in 60 min
	lactate >3.5)  > 2 findings: activate MTP; switch from crystalloid to blood products  • Give blood products in balanced ratios PRBC:FFP; wt. based ~10ml/kg  • TXA if w/in 3 hours from injury – 15mg/kg over 10 min  • Mannitol contraindicated- Neurosurgeon discretion only  • No NSAIDs  • Refer to Ortho & Plastics Intake Guide for injuries requiring Ortho attending comm'n  • Antibiotics for all open fractures w/in 60 min

## Electronic Image transfer → Request OSH to push images electronically to UCSF

If OSH needs help, request Access Center to facilitate by providing Film Library phone number or direct transfer of referring provider to Film Library for assistance.

BCH Oakland: MUST Call & Email Radiology to inform of expected urgent Trauma image upload

**UCSF Film Library Contact**
